In this presentation we discuss the origins and trajectory of the Internet. The early work on analyzing and extracting the principles of packet switching is presented, as well as a brief description of the critical events in the growth of the Internet. We also describe our vision of where the Internet is heading. Along the way we offer some words of advice to students and researchers.

Thursday, February 5, 2014
4:00-6:00 p.m.
McMurtry Auditorium
Anne and Charles Duncan Hall

A reception in Martel Hall will immediately follow the lecture
